Profile

Backend Systems Engineer specializing in crypto trading bots, web scraping, data pipelines, and RAG systems. I build real-time trading and market-data systems, custom Telegram and Discord bots, reliable scrapers and monitoring tools, and AI-powered search over collected or proprietary data.

Professional Experience

11/2024 – 05/2025
USA

Junior Full-Stack Developer
Prim/Hashim (*LunarProxy*)

- Redesigned websites to optimize navigation and increase visual appeal (**boosting traffic by over 2x!**).
- Enhanced website speed and scalability
- Utilized **Git** and **Figma** for effective collaboration.

Projects

Polymarket Bot (Telegram)
A Go-based Polymarket CLOB trading engine with real-time market feed processing, EIP-712–derived API credentials, HMAC-L2 authentication, and latency-tuned automated order execution, paired with a Telegram bot for easy of access.

shiabox
AI-powered search engine for Shi'a ahadith, utilising a RAG architecture with Qdrant for the vector database and mxbai-embed-large for embeddings. Paired with a private, personal-use Discord bot.

Hilol Discord Bot
Built a configurable Discord chatbot using TypeScript, Node.js, discord.js, and the Groq API. Features channel-based conversation memory, customizable personalities, interactive slash-command setup, and automated replies.

FindClients
Self-hosted, AI-powered lead discovery for freelancers. It watches Upwork for new job postings and scrapes X/BHW/other for people who are hiring, optionally screens finds with Google Gemini, and puts it all in a dashboard or notifies you via Discord.

HDISTW
HowDoIScrapeThisWebsite is an AI-powered local web recon tool that analyzes how websites load and expose data. It captures browser network activity, detects REST, GraphQL, Next.js data, embedded state, authentication, pagination, and client-side rendering, then recommends the most efficient extraction strategy for scraping.

SimpleNotes to GoogleDrive Sync
Syncs Simplenote notes to Google Drive as Word documents.

ASMathPDFParser
Automated PDF processing pipeline that extracts 326 Paper 3 maths questions from a 1,636-page source, removes unwanted formatting, and repacks them into a clean ~316-page A4 booklet while preserving vector-quality maths. Uses vision AI via OpenRouter to classify questions by topic and generate a searchable topic index.

Reversio
An AI-powered reverse engineering platform built with Go and Ghidra that transforms Windows executables into searchable semantic knowledge.

CambridgePastPapersAI
Turns Cambridge past paper PDFs into structured JSON, one record per question, powered by Gemini.

Reddit Video Maker Bot
Automated Reddit content pipeline that scrapes threads and comments, filters and deduplicates content, and converts selected stories into short-form videos with AI voice synchronization.

Quizlet Flashcards Scrapper
Backs up every public flashcard set in every public folder on a Quizlet profile, one text file per set.

DevSpoofGO
A C++/Golang dll injector that spoofs your device information for (non-commercial) programs, utilising WinAPI/Reg/WMI methods.
