🔗 Personal Website

🔄 Seekehr

Profile

Backend Systems Engineer specializing in AI automation, real-time infrastructure, and high-performance web applications. I work best with startups, SaaS founders, and businesses that need efficient engineering solutions rather than generic websites.

Professional Experience

11/2024 – 05/2025
USA

Junior Full-Stack Developer

Prim/Hashim (LunarProxy) 🔗

- Redesigned websites to optimize navigation and increase visual appeal (**boosting traffic by over 2x!**).
- Enhanced website speed and scalability
- Utilized **Git** and **Figma** for effective collaboration.

Projects

Reversio 🔗

An AI-powered reverse engineering platform built with Go and Ghidra that transforms Windows executables into searchable semantic knowledge.

shiabox 🔗

AI-powered search engine for Shi'a ahadith, utilising a RAG architecture with Qdrant for the vector database and mxbai-embed-large for embeddings.

FindClients 🔗

Self-hosted, AI-powered lead discovery for freelancers. It watches Upwork for new job postings and scrapes X/Twitter for people who are hiring, optionally screens the X finds with Google Gemini, and puts it all in a dashboard.

Polymarket Bot 🔗

A Go-based Polymarket CLOB trading engine with real-time market feed processing, EIP-712-derived API credentials, HMAC-L2 authentication, and latency-tuned automated order execution.

DevSpoofGO 🔗

A C++/Golang dll injector that spoofs your device information for (non-commercial) programs, utilising WinAPI/Reg/WMI methods.

Hyflip 🔗

A paid product that was later open-sourced, a powerful auction sniper written in Golang, and paired with a client-side mod written in Kotlin and a website.
