Profile

Backend Systems Engineer specializing in web scraping, data extraction, and automation infrastructure. I build reliable crawlers, monitoring systems, RAG pipelines, and backend APIs that turn messy web data into structured, usable information for startups and SaaS businesses.

Professional Experience

11/2024 – 05/2025
USA

Junior Full-Stack Developer

Prim/Hashim (LunarProxy) 🔗

- Redesigned websites to optimize navigation and increase visual appeal (**boosting traffic by over 2x!**).
- Enhanced website speed and scalability
- Utilized **Git** and **Figma** for effective collaboration.

Projects

GetAIMade 🔗

We build custom AI systems that collect, structure, monitor, and search data, helping businesses automate research, uncover insights, and act faster.

Reversio 🔗

An AI-powered reverse engineering platform built with Go and Ghidra that transforms Windows executables into searchable semantic knowledge.

shiabox 🔗

AI-powered search engine for Shi'a ahadith, utilising a RAG architecture with Qdrant for the vector database and mxbai-embed-large for embeddings.

Polymarket Bot 🔗

A Go-based Polymarket CLOB trading engine with real-time market feed processing, EIP-712-derived API credentials, HMAC-L2 authentication, and latency-tuned automated order execution.

FindClients 🔗

Self-hosted, AI-powered lead discovery for freelancers. It watches Upwork for new job postings and scrapes X/Twitter for people who are hiring, optionally screens the X finds with Google Gemini, and puts it all in a dashboard.

CambridgePastPapersAI 🔗

Turns Cambridge past paper PDFs into structured JSON, one record per question, powered by Gemini.

DevSpoofGO 🔗

A C++/Golang dll injector that spoofs your device information for (non-commercial) programs, utilising WinAPI/Reg/WMI methods.

Quizlet Flashcards Scrapper 🔗

Backs up every public flashcard set in every public folder on a Quizlet profile, one text file per set.
